

Assignment #7: Interview Questions
Due Date: October 21, 2008

Goal for this assignment: **“pick the brain” of a well-known Cognitive Scientist to discover how they got to where they are, why they study what they do, how they see their field and the broader field of Cognitive Science, what the “big” issues are, or anything else you might want to know (within reason, of course).**

For this assignment you must:

Prepare at least 5 questions that you would ask Prof. Joan Sereno in a one-on-one interview. Because of time constraints, each of you will not interview her independently. Rather, I will compile your questions, and we will pose the most popular and most intriguing questions to her when she visits the class on October 23, 2008.

A good interviewer tries to get to know the subject of the interview, so I suggest that you review Prof. Sereno’s web site (<http://www2.ku.edu/~kuppl/>), and look at some of her publications on PsychInfo (be sure to look for the work of “J” Sereno, not the work of her brothers or sisters) to help you formulate interesting and intriguing questions to ask.

Please submit your questions via e-mail in: (1) the body of the e-mail message, or (2) a document saved in RICH-TEXT-FORMAT only. Your full name and your KUID should appear in the message or document.
